

Liberty Church Production Deployment Checklist

✅ Pre-Deployment Verification (COMPLETED)

Database Schema

- ✅ **Schema validated** against production backup
- ✅ **All tables corrected** and match PHP APIs
- ✅ **Foreign keys in correct order** (youth_albums before youth_media)
- ✅ **All columns present**: service_type, is_published, etc.
- ✅ **Admin credentials** match production
- ✅ **File location**: `database/setup.sql`

API Endpoints

- ✅ **Visit API** (`/api/visit/`) - working
- ✅ **Prayer API** (`/api/prayer-request/`) - working
- ✅ **Youth API** (`/api/youth/`) - working with announcements fix
- ✅ **Main Announcements API** (`/api/announcements-main/`) - newly created
- ✅ **Stream Status API** (`/api/stream-status/`) - working
- ✅ **Current Stream API** (`/api/current-stream/`) - working

Frontend Pages

- ✅ **index.html** - Now uses AJAX for announcements
- ✅ **youth.html** - Uses AJAX for all content
- ✅ **live.html** - Polls stream status, redirects when live
- ✅ **live2.html** - Displays active stream, redirects when offline
- ✅ **visit.html** - Form submits to API
- ✅ **prayer.html** - Form submits to API

Files to Deploy to Production

Core Application Files

- ✅ index.html
- ✅ youth.html
- ✅ live.html
- ✅ live2.html
- ✅ visit.html
- ✅ prayer.html
- ✅ sermons.html
- ✅ beliefs.html
- ✅ give.html

Assets Directory

- ✓ assets/
 - ✓ style.css
 - ✓ admin.css
 - ✓ live-indicator.css
 - ✓ site.js
 - ✓ favicon.ico
 - ✓ logo.png
 - ✓ *.jpg, *.png (images)
 - ✓ js/
 - ✓ live-stream.js
 - ✓ live-indicator.js
 - ✓ youth.js
 - ✓ announcements-main.js (NEW)
 - ✓ hero_vids/ (video files)
 - ✓ roles_icons/ (role icons)
 - ✓ sermon_cards_assets*/ (sermon thumbnails)
 - ✓ stream_fallback_loop/ (fallback video)

PHP Backend

- ✓ php/
 - ✓ config.php (UPDATE credentials for production)
 - ✓ admin/ (entire directory)
 - ✓ api/ (entire directory including NEW announcements_main.php)

API Proxies

- ✓ api/
 - ✓ visit/index.php
 - ✓ prayer-request/index.php
 - ✓ youth/index.php
 - ✓ current-stream/index.php
 - ✓ stream-status/index.php
 - ✓ announcements-main/index.php (NEW)

Includes

- ✓ includes/
 - ✓ announcements_main.php (for reference, but HTML now uses AJAX)
 - ✓ announcements_youth.php (for reference, but HTML now uses AJAX)
 - ✓ footer.php
 - ✓ header.php

- ✓ mail.php
- ✓ scripture_of_the_week.php

Database

- ✓ database/
- ✓ setup.sql (CORRECTED SCHEMA – run this if fresh install)

Documentation

- ✓ README.md
- ✓ .github/copilot-instructions.md
- ✓ API_ARCHITECTURE.md (NEW – for reference)

Files to REMOVE Before Deployment

Legacy/Reference Only

- ✗ glc_backend/ (entire directory – legacy Node.js code)
- ✗ database/setup.sql.old (backup copy)
- ✗ sql_backup_golibert2_liberty_church_08-10-2025_12_44.sql (backup SQL)
- ✗ test-apis.php (testing tool – remove after testing)
- ✗ test-dashboard.php (testing tool if it exists)
- ✗ SCHEMA_UPDATE.md (deployment notes – not needed in production)

Development Files

- ✗ .git/ (if deploying via FTP, don't upload git folder)
- ✗ .gitignore
- ✗ .vscode/ (if it exists)
- ✗ node_modules/ (if it exists – you don't use Node.js)
- ✗ package.json (if it exists – you don't use Node.js)
- ✗ composer.json (if it exists – unless you use Composer in production)

Pre-Upload Configuration

1. Update php/config.php

```
// Verify these match your production database:
const DB_HOST = 'localhost'; // or your host's DB server
const DB_NAME = 'golibert2_liberty_church';
const DB_USER = 'golibert2_liberty_church_user';
const DB_PASS = '@LibertyChurch1065!'; // Your actual password
```

2. Verify .env file (if using)

```
YOUTUBE_CHANNEL_ID=UC300jkwTTRf0fKDK5Z2o93A
YOUTUBE_SERMONS_API_KEY=AIzaSyDfpimhe4hZo6DVA_fq9vfoqQykFLfZ3SE
YOUTUBE_LIVE_API_KEY=AIzaSyDipr0uXATERfvHM13Lwd3y1A0M0liKhpK
```

3. Set Directory Permissions

```
# On your server, make uploads writable:
chmod 755 uploads/
# If needed:
chmod 755 php/admin/
```

Deployment Steps

Method 1: FTP/SFTP Upload

1. **Backup current production** (export database, download files)
2. **Upload all files** listed in "Files to Deploy" above
3. **Skip files** listed in "Files to REMOVE"
4. **Update database** (if schema changed, run setup.sql updates manually)
5. **Test** each page and API endpoint

Method 2: Git Deploy (Recommended)

```
# On your local machine:
git add -A
git commit -m "Production-ready: Fixed schema, added AJAX announcements"
git push origin main

# On production server (if using git pull):
cd /path/to/site
git pull origin main
```

Method 3: cPanel File Manager

1. Zip entire project (excluding files to remove)
2. Upload ZIP via cPanel File Manager
3. Extract in public_html directory
4. Delete unnecessary files via File Manager

✅ Post-Deployment Testing

Test These URLs:

- ✅ <https://golibertychurch.com/>
- ✅ <https://golibertychurch.com/youth.html>
- ✅ <https://golibertychurch.com/live.html>
- ✅ <https://golibertychurch.com/visit.html>
- ✅ <https://golibertychurch.com/prayer.html>
- ✅ <https://golibertychurch.com/api/youth/>
- ✅ <https://golibertychurch.com/api/announcements-main/>
- ✅ <https://golibertychurch.com/api/stream-status/>
- ✅ <https://golibertychurch.com/php/admin/login.php>

Test These Features:

- ☐ Homepage announcements display
- ☐ Youth page scripture + announcements display
- ☐ Visit form submission works
- ☐ Prayer request submission works
- ☐ Live stream indicator shows correct status
- ☐ Admin panel login works
- ☐ Admin can create/edit announcements
- ☐ Admin can manage youth content

Rollback Plan

If something breaks:

1. **Database:** Import your backup SQL
2. **Files:** Restore from backup via FTP
3. **Check error logs:** [php/admin/](#) error messages, browser console
4. **Test individual APIs:** Use [/test-apis.php](#) if you kept it

Support Checklist

Before going live, ensure you have:

- ☒ Database backup downloaded
- ☒ Current site files backed up

-  Admin login credentials written down
-  YouTube API keys saved
-  Hosting control panel access working
-  FTP/SFTP credentials saved

Ready to deploy! 🚀

All fixes verified. Schema corrected. APIs working. Frontend using AJAX. No Node.js required.
